PTM: Lysines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in all cases and bind carbohydrates.

PTM: Prolines at the third position of the tripeptide repeating unit (G-X-Y) are hydroxylated in some or all of the chains.

PTM: May contain numerous cysteine residues involved in inter- and intramolecular disulfide bonding.

SIMILARITY: Belongs to the fibril-associated collagens with interrupted helices (FACIT) family.

SIMILARITY: Contains 8 fibronectin type-III domains.

SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               s Swiss-Prot entry is copyright.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             183
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                63

                                                                                                                                            Alignment
                                                                                                                                                                            The invention relates to Willebrand Factor A domain related-protein (MARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human VA domain
                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated Willebrand Factor A-Related Protein polypeptide useful for the manufacture of a medicament in the treatment of a disease condition of the extracellular matrix, in particular arthritis.
                                                                                                                                            Sequence 180

preventing, treating Parkinson's diseases Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's and and cancers.

Claim 11; Page 532-533; 607pp; English.

CC AAB9185-AAF91929 represent cDNAs corresponding to 52 human secreted CC protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes can their corresponding secreted proteins are useful for preventing, treating or ameliorating medical conditions, e.g., by protein or gene conductions in a sample or by determining the presence of mutations in the new genes. Specific uses are described for each of the community of the new protein in a sample or by determining the presence of community of the new genes. Specific uses are described for each of the community of the new genes. Specific uses are described for each of the community of the new genes. Specific uses are described for each of the community of the new genes. Specific uses are described for each of the community of the new genes. Specific uses are described for each of the community of the new genes. Specific uses are described for each of the community of the new genes. Specific uses are described for each of the community of the new genes. Specific uses are described for each of the community of the new genes. Specific uses are described for each of the community of the new genes. Specific disorders, diseases of the immune system, comparison of the proteins of the community developmental comparison of the proteins can also be used to allow ound the community of primary tissues, to regenerate tissues, to dentify their compared to maintain organs before transplantation, for supporting cell community of maintain organs before transplantation, for supporting cell community of maintain organs before transplantation, for supporting cell as a food additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in alleviating symptoms associated with the disorders mentioned above, and indusposite the invention of the invention engine linked community of the present sequence represents a human general protein of the inventio

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to albumin fusion proteins comprising a therapeutic protein X and human albumin (HA, also known as human serum albumin, HSA). The proteins are useful for treating a disease or disorder that may be modulated by therapeutic protein X. The albumin extends the shelf-life of protein X, and may increase its biological in vitro/in vivo activity. The protein is useful for treating and diagnosing disorders such as cancer, reproductive disorders, digestive disorders (e.g. Crohn's disease, ulcerative colitis), immune disorders (e.g. acquired immunodeficiency syndrome, AIDS), endocrine disorders (e.g. diabetes), haematopoietic disorders, neural disorders (e.g. Alzheimer's, Parkinson's, Creutzfeldt-Jacob disease, encephalomyelitis, meningitis, schizophrenia), and connective disorders (e.g. osteoporosis, arthritis).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                밁
                                                                                       CC The invention relates to a novel albumin fusion protein. The invention CC further relates to: a composition comprising the albumin fusion protein CC and a pharmaceutical carrier; a kit comprising the composition of the CC albumin fusion protein formula; a method of treating a disease or CC disorder in a patient comprising the step of administering the albumin CC fusion protein; a method of treating a patient with a disease or disorder CC that is modulated by Therapeutic protein: X, or its fragment or variant; CC fragment or variant; a nucleic acid molecule comprising a polynucleotide cC fragment or variant; a nucleic acid molecule comprising the protein and a host cell comprising the albumin fusion protein; and a host cell CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the albumin fusion protein. The CC comprising the nucleic acid molecule of the following CC cativities: cytostatic, antianaemic, antiarthritic, antiasthmatic, antiasthmatic, antianaemic, dermatological, antigout, immunomodulator, antiarrhythmic, CC cardiant, nootropic, antilipaemic, nephrotropic, uropathic, anabolic, neuroprotective, antiparakinsonian, tranquilizer, antidiabetic, anabolic, hypertensive and uniterary mass lbumin fusion protein and continuous and anabolic, antiparakinsonian, tranquilizer, antidiabetic, anabolic, hypertensive and uniterary mass lbumin fusion protein and continuous and anabolic, antiparakinsonian, tranquilizer, antidiabetic, anabolic, hypertensive and uniterary mass lbumin fusion protein and continuous and uniterary mass lbumin fusion protein anabolic, antiparakinsonian, tranquilizer, antidiabetic, anabolic, anabolic, antiparakinsonian, tranquilizer, antidiabetic, anabolic,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        12-APR-2000;

CC AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted CC AAB87414-AAB87454 represent human secreted proteins they encode. CC AAB87414-AAB87454 represent human secreted protein fragments. The genes CC and their corresponding secreted proteins are useful for preventing. CC treating or ameliorating medical conditions, e.g., by protein or gene CC amount of the new genes. Specific uses are described for each of the CS genes, based on the tissues in which they are most highly expressed, and include developing products for the diagnosis or treatment of CC and include developing products for the diagnosis or treatment of CC proliferative disorders, cancer, tumours, foetal and developmental call abnormalities, haematopoietic disorders, diseases of the immune system, CC AIDS, autoimmune diseases (e.g., rheumatoid arthritis), inflammation, CC allergies, neurological disorders (e.g., Alzheimer's disease, CC cardiovascular disorders, pregnancy-related disorders, asthma, skin CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC gastrointestinal disorders, pregnancy-related disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound the compared properties of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used CC as a food additive or preservative to modify storage properties.

CC alleviating symptoms associated with the disorders mentioned above, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               preventing, treating or ameliorating Parkinson's diseases and cancers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid molecules encoding human secreted proteins, used in preventing, treating or ameliorating a disorder, e.g. Alzheimer's
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gastrointestinal disorder; pregnancy-related disorder;

                                                                                                                                                                                                                                 Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                              CC and their corresponding secreted proteins are useful for preventing, cc treating or ameliorating medical conditions, e.g., by protein or gene ct therapy. Pathological conditions can be diagnosed by determining the camount of the new protein in a sample or by determining the preventing to the camount of the new genes. Specific uses are described for each of the CC amount of the new genes. Specific uses are described for each of the CC proliferative disorders, cancer, tumours, foetal and developmental and camourmalities, haematopoietic disorders, diseases of the immune system, cancer, tumours, foetal and developmental CC abnormalities, haematopoietic disorders, diseases of the immune system, callergies, neurological disorders (e.g., Alzheimer's disease, CC parkinsons's disease), cognitive disorders, schizophrenia, asthma, skin CC disorders (e.g., psoriasis), sepsis, diabetes, atherosclerosis, CC parkinsons's disease), cognitive disorders, kidney disorders, endocrine CC disorders, and infections. The proteins can also be used to aid wound CC thealing and epithelial cell proliferation, to prevent skin aging due to comburn, to maintain organs before transplantation, for supporting cell CC culture of primary tissues, to regenerate tissues, to identify their CC cognate ligands or binding partners, and in chemotaxis, and can be used as a food additive or preservative to modify storage properties.

CC Antibodies specific for a protein of the invention can be used in disgnostic immunoassays e.g., radioimmunoassay created above, and cin disgnostic immunoassays e.g., radioimmunoassay entering a human cC secreted protein fragment referred to in the disclosure of the invention
                                                                                                                                                                                                               Local Similarity:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAF91858-AAF91929 represent cDNAs corresponding to 52 human secreted protein genes, and AAB87342-AAB87413 represent the proteins they encode. AAB87414-AAB87454 represent human secreted protein fragments. The genes

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The college may be used to study the expression and function of antibodies against them and in assays to identify modulators (agonists and activity. The antibodies and antagonists of expression and activity. The antibodies and antibodies may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme colinked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid arthritis and diabetes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 285 AA;

                                                                                                                                                                                                                                                                                                                                                                         The present invention relates to novel human secretory proteins or membrane proteins, and their coding sequences. The present sequence is one such protein sequence. The coding sequences of the invention are useful for examination and diagnosis of abnormality of the human secretary proteins and in gene therapy methods. The coding sequences are proteins are useful as candidates for medicines or as target molecules for developing medicines. Antibodies against the proteins of the invention are useful for treating diseases that are associated with the proteins. Note: The sequence data for this patent did not form part of the printed specification, but was obtained from sequence information supplied by the European Patent Office.

WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human WARP protein

                                                                                                                                                                                                                                                                                                                           Alignment
                                                                                                                                                                                                       US-10-699-035A-1 (1-537) x ABP69674 (1-445)
                                                                                                                                                                                                                                                                                Percent Similarity:
                                                                                                                                                                                                                                                                                                                                                                                protein or complementary sequences. The polynucleotides are useful for identifying expressed genes or for physical mapping of human genome. The encoded polypeptides (ABP68902-ABP69849) are useful as molecular weight markers, as a food supplement, for generating antibodies, in medical imaging, screening and diagnostic assays and for treating cell-proliferative disorders (cancer), neurodegenerative diseases (Parkinson's or Alzheimer's disease), autoimmune diseases (multiple sclerosis, diabetes, lupus) genetic disorders, myeloid or lymphoid disorders, platelet or coagulation disorders, wound, burns, incision, ulcers, liver or lung fibrosis, infections (bacterial, viral, fungal, parasitic), arthritis, etc. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                Local Similarity:
                                                                                                                                                                                                                                                                                                                                                          Sequence 445
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 9; SEQ ID NO 1721; 1012pp + Sequence Listing; English
